Art Unit: 1754

The following is an examiner's statement of reasons for allowance:

The closest prior art is USP 4,986,893 to Seo. Seo discloses a process for producing pitch having: optical anisotropy; a softening point in the range of 195°C to 230°C; and an infusibilization (oxygen cross-linking) temperature of 265°C. However, Seo '893 teaches a step of removing the volatiles (light components) of the pitch prior to infusibilization (oxygen cross-linking) (see column 11, lines 12-14). Further, the carbonizing step of Seo is 300°C/hour, which is lower than the claimed 500°C/hour.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
